

WHEEL

- Only major constellations are shown
- Constellations are in **ALL CAPS**; bright stars are in *Italics*
- Ursa Major is shown as only the Big Dipper; the full constellation is larger
- The Pleiades is a small star cluster, visible to the naked eye
- M31 is the Andromeda Galaxy, barely visible to the naked eye under ideal conditions
- The “Autumn Void” is an area devoid of bright stars and prominent constellations
- The “Summer Triangle” is not a constellation, but it helps to locate Cygnus, Lyra, and Aquila
- This wheel is to be used in conjunction with the Star Wheel frame (second page)
