COURSE PROPOSAL: Contemporary Health I

1. Details

a. Course Title: Contemporary Health I

b. Sponsors: Richard Fopeano, Edith Rowand, Health and Exercise Science

c. Credit Hours: 3 credit hours

d. Course Level: Sophomore level

e. Prerequisites: No Prerequisites.

f. Suggested Time and Scale of Implementation: 2 sections Fall semester, beginning Fall 1999

g. Curricular Effect: Major requirement. This course will replace Contemporary Health which is currently not divided into Parts I and II

h. Adequacy of Present Staff/Resources: Present faculty are available to teach this course.

i. Library Resources: Current holdings are adequate for the needs of this course.

2. Rationale

The course content in the area of health education has expanded greatly over the past decade. Recently established national and state standards require that curriculum in this area of study address 10 specific content topics. The current 3 credit contemporary health course which is offered through the Health and Exercise Science Department provides an inadequate amount of time to prepare prospective professionals for work in this area. By expanding the course into Part I & II, all appropriate areas will be addressed.

This new course is designed to assist the student to understand a variety of health issues which occur in the human lifecycle in modern society. The focus will be directed to the latest information concerning the nature of the health issue, the etiology of related problems, along with available behavioral and biological services as it relates to protecting and improving individual's health.

3. Essence of the Course

a. Objectives:

By the completion of the Contemporary I course the student will be able to:

1. Identify the holistic nature of health as it relates to the human lifecycle
2. Develop an understanding of the physical, emotional, social, intellectual, spiritual and environmental factors which influence one's health.
3. Distinguish between behaviors which foster and those that hinder well-being.
4. Recognize the role of learning and effective experiences in shaping patterns of health behavior.
5. Identify the various components of family life and how they affect one's overall health status.
6. Discuss the developmental nature of human sexuality, including the physiological, psychological and social changes which occur throughout a lifecycle.
7. Identify problems which commonly occur related to sexuality as well as behavioral and medical solutions.
8. Discuss the normal phases of human growth and development throughout the lifecycle (from conception to death) and the associated health concerns including personal lifestyle management strategies.
9. Recognize the nature of positive mental and emotional health, the necessary lifestyle management strategies, related problems and possible solutions to issues which occur.
10. Demonstrate an understanding for the human aging process and the accompanying health issues which are presented in the later stages of the lifecycle.
11. Identify the historical as well as present physical, psychological, social and economic issues associated with death and the dying process.
12. Select valid sources of information about health needs and interests using computerized data gathering methods.

b. Topical Outline/Content
1. The nature of health and the factors which influence its effective maintenance in today's society.
2. Reliable sources of general health and medical information.
3. Family Life
   The function and influence of the family on one's health status
   Decision Making, Conflict Management, and Communication Skills
   Healthful family relationships
   Problem Solving techniques
4. Human Sexuality
   The origins and nature of sexuality
   Sexuality throughout the lifecycle
   Biological components of Sexuality
   Psychological and social factors associated with sexuality
   Contraception, Pregnancy and Childbirth
   Maintaining healthy sexual relationships
   Sexual Orientation and behavioral choices
   Sexual disorders and diseases
5. Growth and Development
   Biological and Psychological changes accompanying normal growth periods
   Development tasks required for proper maintenance of the body systems
6. Mental and Emotional Health
   Self Esteem
   Expression of Feelings
Dealing with stress
Emotional related problems and disorders

7. Aging
   Physical, psychological and social changes which occur in the aging process
   Caring for the aged
   Economic Health Care for the elderly

8. Death and Dying
   Grief and coping with death
   Rituals of Death in the U.S.
   Personal and family options

c. Evaluation and Grading Procedures
   A variety of methods will be used to evaluate student's progress. These will include:
      Individual research assignments
      Personal reaction papers
      Oral presentations
      Examination and Quizzes

d. Course Evaluation
   This course will be evaluated at the conclusion of each semester through student evaluation, staff (self) evaluation, and classroom observations conducted by a qualified member of the Department of Health and Exercise Science

4. Results of Consultations
   This course is an expansion of a currently taught course through this department. Therefore, no consultation was deemed necessary.
